

ULPF - Universal Log Pre-processing Framework

Architecture Document | Implemented MVP and Production Scale Path

LOSSLESS

AIR-GAP READY

MVP principle: parse source-specific syntax once, normalize into a shared taxonomy, and never discard the original event.

Runtime is local and self-contained; production scale components such as Kafka are architectural extensions, not implemented in the MVP.

ULPF Architecture - Design Details

Lossless processing, extensibility, air-gapped deployment, and production scaling
